

Hybrex System Enhancement

Emergency Evacuation Alert

Hybrex Australia is pleased to announce the release of a new feature for their GDS systems which has been specifically developed with the public safety needs of Hospitality Industry needs in mind.

The "Emergency Evacuation Alert" is our latest feature to be included in our GDS systems range having been developed to assist with any emergency situations which may occur at a venue. This feature is only available on our latest GDS systems and provides assistance in the event of an Emergency Evacuation Alert being activated. The feature provides the venue operator with the ability to trigger an Evacuation Alert which then allows every Hybrex telephone handset within the venue to broadcast a pre-recorded announcement.

Announcement Example:

"This an Evacuation Alert, please make your way to the nearest exit and meet at the designated assembly point." (repeated)

This feature is beneficial for any size venue, but will have greater benefits in larger venues where higher numbers of staff and guests will be distributed throughout. The feature will allow you to communicate with all of your staff and guests via the GDS system, minimising the number of manual checks that are required to be undertaken. Utilising the Hybrex GDS system, you can not only manage the telephony needs of your venue and your guests, you can also communicate to everyone on site in the event of an Emergency Evacuation Alert situation.

Utilising Hybrex Digital handsets for relevant locations, and Analogue AH99-PN handset for your guest rooms, you can create a complete announcement system. This system can also function as a Paging system, as well as providing the specific Emergency Evacuation function. Hybrex handset's have been designed to provide this functionality and in doing so they provide the complete Telephone & Announcement system for any size venue. The only time that someone won't be paged, is if they were on the telephone at the same time as the page was being activated.

As a Hospitality Operator, utilising the Hybrex GDS system you will also eliminate the need to duplicate the cabling to every point of your venue. The Hybrex solution will also aid you in meeting your Work Health & Safety obligations for your venue and in doing so, you will be keeping your staff and guests safe.

As a Venue operator you may also have the added benefit of a lower risk liability insurance because of this feature and you would be encouraged to contact your risk management or insurance company for further details of the benefits and possible

For more information about this feature or any other Hybrex product please contact your local Hybrex Dealer or Hybrex Australia on 1800 356288.
